

Hedgehog Maths

The hedgehogs are trying to catch lots of minibeasts before they hibernate for the Winter.

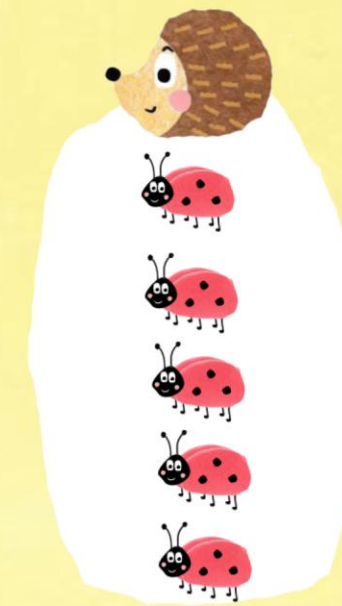

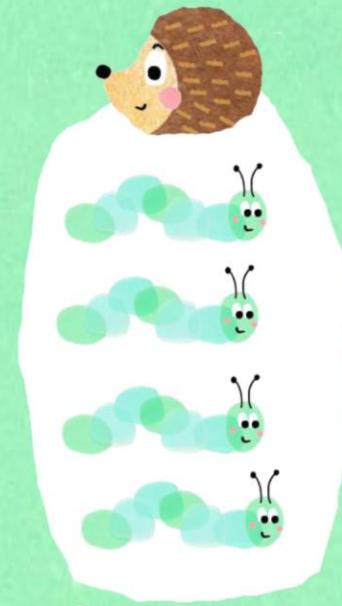

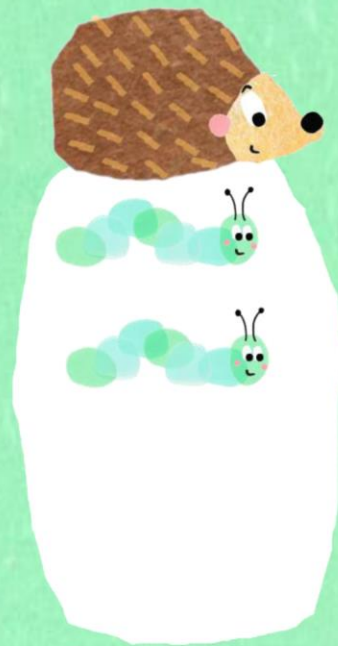

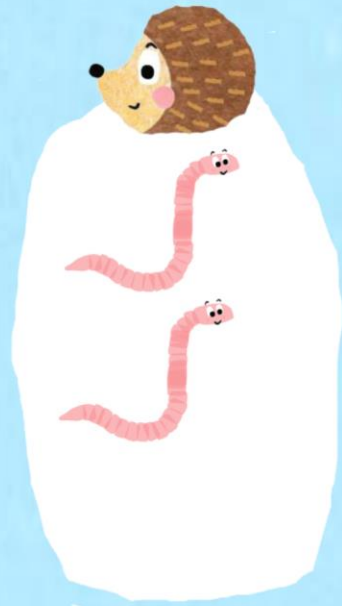

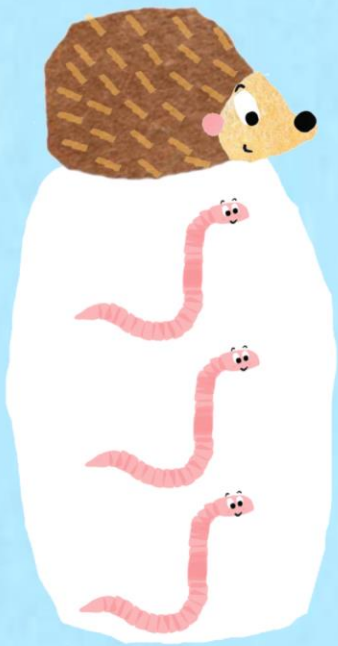

Can you subitise then say whether mummy hedgehog has more, fewer or the same number of minibeasts as her baby hedgehog?

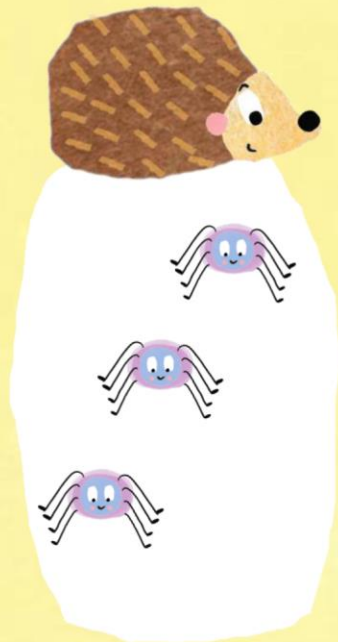

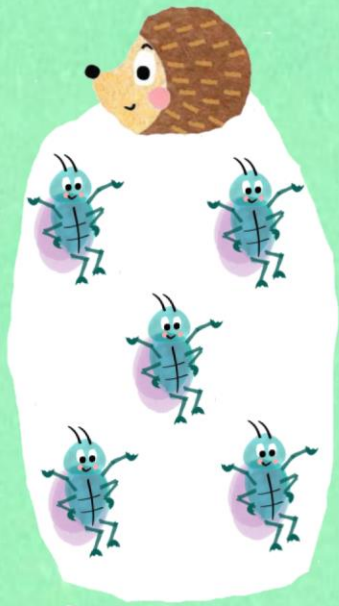

If more or fewer, how many more would you need to add or take away to make them have the same?

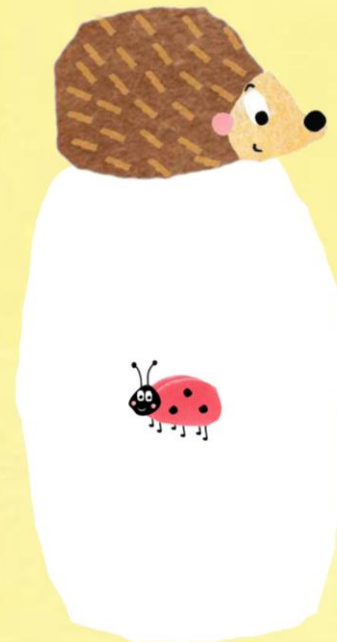

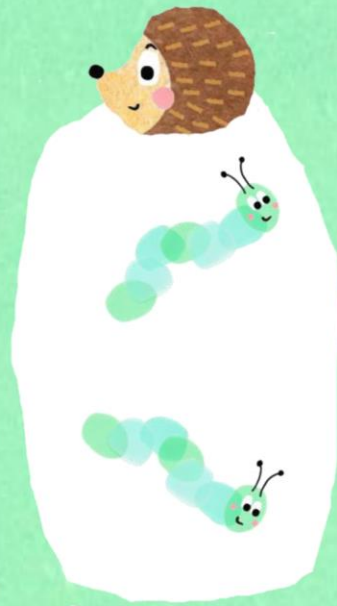

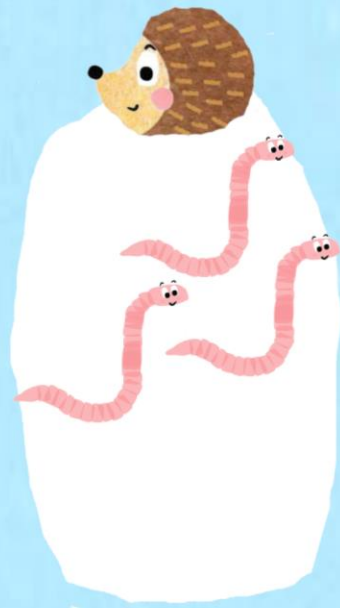

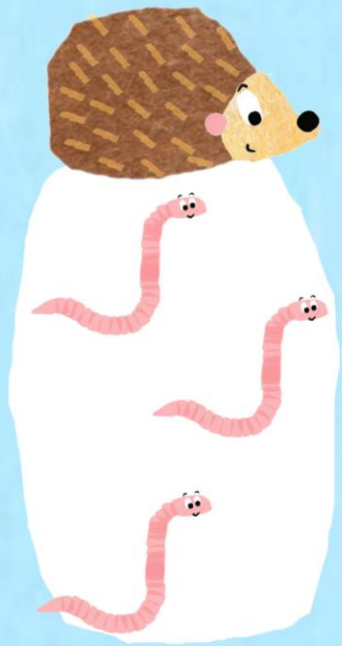

Can you add the number of mummy's minibeasts to baby's minibeasts, to see how many they have all together?

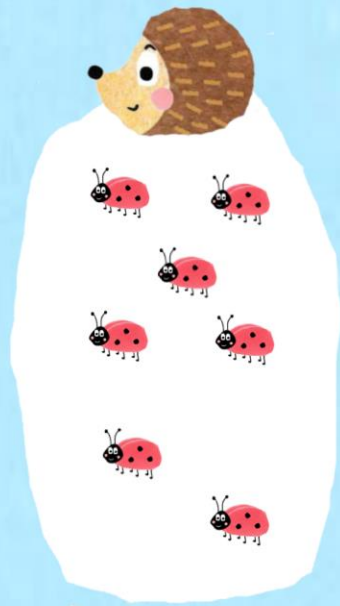

They better be quick, these minibeasts are speedy!
